Correction
The article “Hemodialysis Prescription in Pregnant Women” by Nishanta Tangirala and Michelle A. Hladunewich published in August 2023 Kidney News contained an incorrect statement due to a production error. The recommended dialysis intensification in Table 1 “Dialysis prescription recommendations during pregnancy” read:

“Increase dialysis duration to approximately 6 hours/week (5–7 sessions/week).”

This recommendation should read:

“Increase dialysis duration to approximately 36 hours/week (5–7 sessions/week).”

ASN Kidney News is not a warranty, endorsement, or recommendation for products or services advertised or their effectiveness, quality, or safety. If an advertisement contains an incorrect statement due to a production error, the statement is the responsibility of the advertiser. It is the policy of Kidney News to publish relevant disclosures of authors.

The American Society of Nephrology is an international, nonprofit, professional society representing over 20,000 nephrologists and their allied health professionals. The Society is committed to advancing the research, education, training, and practice of nephrology.
